

Ghana, Liberia and Zambia govern their oil, gas and mining sectors better than Russia or China

The Resource Governance Index (RGI) measures the quality of governance in the oil, gas and mining sector of 58 countries, which produce 85% of the world's petroleum, 90% of diamonds and 80% of copper – a market valued at \$2.6 trillion in 2010. The 2013 RGI, measured on a scale of 0 to 100, reveals that Ghana, Liberia, Zambia and South Africa outperform Russia and China.

The Regulatory Quality Index, which is part of the World Bank's Worldwide Governance Indicators (WGI) and measured from -2.5 to 2.5, reflects perceptions of the ability of a government to formulate and implement sound policies and regulations that permit and promote private sector development. The 2012 report revealed that Mauritius, Botswana, South Africa and three other Sub-Saharan African countries outperformed China, Russia and India.
